JIHAD MAASARANI

RevOps Technologist | HubSpot Implementation, CRM Migration & Systems Integration

Beirut, Lebanon | +961 71 919 075 | jihadismasarani@gmail.com | LinkedIn | Remote, 4 PM–12 AM Beirut

SUMMARY

I turn business requirements into CRM systems that teams actually rely on. As a technology consultant at EY, I configure enterprise workflows and integrate platforms like Jira and Microsoft Dynamics end to end, from authentication and field mapping to data migration and testing. I hold the ServiceNow CIS-Data Foundations (CMDB and CSDM) certification, which grounded me in data models, identification and reconciliation rules, and data quality, and I have applied it in a full HubSpot sales CRM and a Salesforce-to-HubSpot migration platform with reconciliation built in. I care about clean data, documenting what I build, and raising problems early, and I use AI tools daily to speed up research and debugging while checking every result against how the platform really behaves.

PROFESSIONAL EXPERIENCE

Technology Consultant | EY *Beirut | Feb 2026 – Present*

- Integrated ServiceNow with Jira and Microsoft Dynamics CRM, owning the full setup: authentication, API connections, field mapping, data transformation, data migration and testing.
- Applied my CIS-Data Foundations (CMDB/CSDM) training to integration and migration work: identification and reconciliation rules, data normalization and data-quality checks that keep migrated records accurate and free of duplicates.
- Built and troubleshot rollout workflows across multiple participating entities for a Saudi government client, owning business-rule design and the front-end UI.
- Configured demand-management workflows and business rules for Qatar University, and built a request-management demo that turned loosely defined requirements into a working build the client used to make its decision.
- Work directly with client stakeholders in working sessions to gather requirements, demo builds, document configurations and support adoption, while balancing several concurrent engagements.

Full Stack Software Developer Intern | Murex *Beirut | Jun 2025 – Aug 2025*

- Built and launched an internal budgeting platform for ~50 asset managers that cut each forecast from ~8 hours to 10 minutes.
- Pulled asset data from the ServiceNow API into PostgreSQL and mapped it into filterable records by asset type, location and fiscal year, replacing manual spreadsheet work.
- Designed an approval workflow where managers review budgets read-only, comment and approve, then track live spent and remaining amounts, backed by role-based access control on every page and endpoint.
- Took it to production with SSO, TLS and Docker, and unit-tested the calculation and approval logic before each release.

HUBSPOT & CRM PROJECTS

HubSpot RevOps Automation & CRM Implementation | HubSpot, workflows, APIs, webhooks, Make *Independent project*

- Configured a complete B2B sales CRM: custom contact, company and deal properties, associations, record layouts and multiple pipelines with stages, probabilities and ownership.
- Built workflows for lead routing by territory, company size, industry and score, lead scoring, and lifecycle progression from Subscriber through MQL, SQL and Opportunity to Customer.
- Automated sales handoffs to account executives, follow-up tasks for stalled deals, and approval routing for high-value deals and special discounts.
- Set up company-specific pipelines, teams and properties for a multi-company account while keeping reporting consistent, with dashboards for conversion, pipeline value, forecast and deal velocity.
- Connected HubSpot to external apps through REST APIs, webhooks and Make scenarios, tested every flow with sample records, and documented the configuration.

Salesforce-to-HubSpot Migration & Data Quality Platform | Python, HubSpot API, Pandas *Independent project*

- Built a Python pipeline that maps Salesforce exports to HubSpot properties, standardizes emails, phones, company names, dates and currencies, and flags duplicates and missing fields before anything is imported.
- Ran sample, full and delta imports through the HubSpot API with rate-limit handling and retries, preserving contact-company and deal-company associations, lead source and consent data.
- Reconciled record counts, IDs, associations and key fields after every run, logged failed records for safe re-import, and wrote the field-mapping document and migration runbook.

SKILLS

CRM & RevOps: HubSpot (objects, properties, associations, pipelines, lifecycle stages, workflows, lead scoring and routing, reports and dashboards), Salesforce data migration, Microsoft Dynamics, Jira, ServiceNow (CMDB, CSDM)

Data & integration: field mapping, data cleaning and deduplication, identification and reconciliation rules, imports, REST APIs, JSON, webhooks, authentication, Make, Zapier, n8n, Python, SQL, PostgreSQL, Pandas

Delivery: requirements gathering, QA and UAT support, root-cause troubleshooting, technical documentation, client demos, Jira, Agile, AI-assisted research with Claude

CERTIFICATIONS & EDUCATION

B.S. Computer Science, American University of Beirut (2023–2025) | GPA 3.86/4.0, Dean's Honor List, full scholarship

ServiceNow CIS-Data Foundations (CMDB & CSDM) | ServiceNow CSA & CAD | Oracle Certified Professional (Java) | AI Programming with Python Nanodegree (Udacity, AWS)
